

Class Exercise 2: Attributing Sources (In-text citations & References) and Paraphrasing

Instructions: *Free write* one paragraph by practicing the appropriate use of APA in-text citations.

Brainstorm similar pieces of advice you have been given in your life by family members (who you consider family!), friends, colleagues, mentors, supervisors, coaches, etc.

Craft a single paragraph (no word min./max.) which describes the scenario and/or context in which you received these pieces of advice, the actual advice given, and (if applicable) either how you have implemented this advice or have navigated conflicting advice in your personal life, or how you have passed along this advice to others. Make it clear to the reader how *you* think these pieces of advice are connected (are they about the same topic? Did you apply them all to the same scenario?)

By **citing** sources with APA in-text citations, you'll be able to make your thoughts distinct from the advice from others.

Requirements: To successfully complete this exercise, you are required to:

1. **Choose** at least two pieces of advice or inspiration you have been given in your life
 - o e.g., *you can conquer anything you set your mind to* (Holcomb, 1997)
 - o for the in-text citation, you'll write the last name of the person who gave you the advice and your estimation of the year it was given to you
2. **Cite** the person(s) who bestowed this advice
 - o aim to include at least two to three (2-3) in-text citations across your paragraph
 - o you can cite the same person more than once (e.g., using two citations for the same sentence)

3. **Write** a coherent paragraph (i.e., full sentences) about the advice using the prompt above
4. **Complete** the paraphrasing exercise

- - - - -

Throughout my life, advice has been handed to me left and right. A few of these ideas have particularly stuck with me. When speaking about future career paths, my dad instilled that I choose a field that I will enjoy working in (Bixler, 2023). While in college, I took this into account when exploring different areas of study. In a separate conversation about lifestyles, I was urged to minimize the amount of stress I experience in my day-to-day life (Perez, 2025). I have implemented this into a lot of my daily decisions, also making sure to spread this way of life to my family and friends. These two pieces of advice connect very well, as enjoyment of one's career can have an impact on the amount of stress one has to deal with.

- - - - -

1. Read the following published sentences and summarize the **authors' findings** in your own words in one sentence.
2. Add a narrative citation to your paraphrased sentence. You do not need to re-cite the works that are already cited in the published sentences.
3. Create an APA reference entry

Published Sentences

Research suggests that people exercise less when demands in their job or studies increase (Englert & Rummel, 2016; Oaten & Cheng, 2005; Sonnentag & Jelden, 2009). Building upon these findings, the present study investigated the relationship between university students' implicit theories about willpower and the amount they exercise during their final examination period. We hypothesized and found that students with a limited theory about willpower—those who believed that their self-control resembles a limited resource—exercised significantly less than students with a nonlimited theory during this stressful period (about 220 min less over the course of 2 weeks). Source Information • Document type: Journal article (Section 10.1)

• **Authors:** Katharina Bernecker and Jule Kramer

• **Publication year:** 2020

• **Article title:** Implicit theories about willpower are associated with exercise levels during the academic examination period

• **Journal information:** Sport, Exercise, and Performance Psychology, Volume 9, Issue 2, pages 216–231

- DOI: <https://doi.org/10.1037/spy0000182>

Your paraphrased sentence and narrative in-text citation:

Bernecker and Kramer (2020) found that the amount of time spent exercising decreases in accordance with the demand of a person's career or area of study. Using university students, they measured the extent to which these students' implicit theories about willpower had on the amount of exercise they took part in during the final examination period. Overall, those who understood willpower less tended to exercise significantly less than those who had a better understanding of willpower.
