

Class Exercise 6: Reverse Introduction Outline

Instructions: **Reverse engineer** an outline for an introduction section of a research paper.

Requirements: To successfully complete this exercise, you are required to:

1. **read** an introduction section of Ludwig et al., (2022)
2. **construct** a reverse introduction outline from the introduction paragraphs you've read
 - o Specifically—for sections 1, 1.1, 1.2, and 1.5—have a bullet point per paragraph (i.e., one sentence) the captures the main idea behind the paragraph. This is often captured in the topic sentence, which states the main idea of the paragraph.
 - o The idea is that by summarizing the main idea per paragraph, you can see the progression or flow of ideas in the paper.

Please use a **word processing program** (such as MS Word) to complete this exercise.

Reverse Outlining

Reverse outlining is a good writing technique in the early stages of the writing process to check whether the message you intend to get across to your reader is evident in your writing and its flow across paragraphs.

“Reverse writing is the process by which you take away all of the supporting writing and are left with a paper’s main points or main ideas, sometimes represented by your paper’s topic sentences. Your reverse outline provides a bullet-point view of your paper’s structure because you are looking at the main points of the paper you wrote.”

-The Writing Center of University of Wisconsin-Madison

<https://writing.wisc.edu/handbook/process/reverseoutlines/>

Outside of class, you will work on creating an outline for the Introduction section of your research paper. Creating an outline will help you plan out your thoughts regarding how your literature review search supports and provides explanation for the motivation and predictions of our class experiment.

This class exercise is additional practice with outlining- just the reverse! You are asked to read the introduction of a published empirical paper and then reverse engineer an outline from the paper. You may choose to apply reverse outlining after you have written your Introduction draft.

Read the Introduction section of Ludwig et al., (2022)—sections 1, 1.1, 1.2, and 1.5. **Construct** an outline from the introduction by extracting the main points of the introduction paragraphs.

Write your reverse outline below:

Section 1:

P1: How well does intellectual or general humility predict whether someone will use a high-quality apology.

Section 1.1:

P1: Apologies are important because they can promote victim forgiveness.

P2: Comprehensive and high-quality apologies serve to exhibit sincerity.

Section 1.2:

P1: The amount of concern a transgressor feels towards a victim, as well as how much they view an apology as a threat, directly impacts the quality of their apology.

P2: There is a correlation between empathy in a transgressor and the likelihood for them to apologize

P3: A transgressor's ability to apologize is affected by how protected they feel.

P4: These characteristics, including intellectual humility, encourage high-quality apologies.

Section 1.5:

P1: There have been no studies that look at intellectual humility's role in a transgressor's response to a victim after committing an act against them.

P2: People who experience more empathy towards a victim may also have higher intellectual humility.

P3: People who experience less threat to their self-image may have higher intellectual humility.
